

COLD FUSION DEVELOPMENT

FIVE DAYS

Course Description:

This course teaches experienced Web developers how to use Cold Fusion to build and maintain dynamic and interactive Web applications. To take full advantage of this course, students should be familiar with Web terminology, know how to create static pages using HTML, and be comfortable with basic SQL including SELECT, INSERT, UPDATE and DELETE.

Prerequisites:

Students must have Web development experience and database experience including:

- Familiarity with Web technology including HTTP and FTP
- Ability to create static web pages using HTML
- Familiarity with basic SQL statements including SELECT, INSERT, UPDATE and DELETE
- An understanding of the ODBC database standard is recommended

Who Should Attend?

Experienced Web developers who wish to manage the ColdFusion development environment, use ColdFusion Markup Language (CFML), use ODBC to interact with database tables, build queries that publish, insert, and update data dynamically, and develop fully interactive, database-driven Web applications.

Course Topics:

- Introduction to ColdFusion
- Exploring ColdFusion Studio
- Publishing Database Content
- Developing Forms
- Dynamic Querying
- Inserting Records
- Updating Records
- Securing Web Pages
